

Step 1: Identify Your Launch Owner

Launch Owner: Product Marketing Manager (with Product Manager as technical lead)

Responsibilities:

- Lead the creation and execution of the GTM action plan.
- Coordinate with product, design, and tech teams to ensure readiness.
- Maintain a **Launch Tracker** (tracking pain points, resolution status, and major decisions).
- Communicate the launch updates and ensure consistent messaging across channels.

Step 2: Know Who You're Trying to Reach

Target Audience:

- Muslims aged 16–45.
- Students, professionals, and homemakers seeking a deeper spiritual connection.
- Users who value emotional and reflective experiences with the Holy Quran.

User Personas:

1. **The Consistency Seeker:** Person who wants reminders and streak tracking to build a daily Quran habit.
2. **The Reflective Learner:** Person who wants to understand meanings and reflect through journaling.
3. **The Emotional Seeker:** Person who looks for ayahs that provide comfort or motivation based on mood.

Competition Check:

- Existing apps like **Islam360** and **Muslim Pro** focus on reading, prayer times, and translations.

- No existing competitor combines **AI mood-based ayah suggestions, journaling, and progress tracking** in one platform.

Use Cases:

- Daily reading and journaling.
- AI suggestions for emotional support.
- Tracking personal growth and consistency.

Step 3: Determine Pricing and Sales Strategy

Initial Pricing Model:

Freemium Model:

- Free basic features: Quran reader, translation, mood check-in, journaling.
- Premium tier: AI summarizer, detailed progress insights, and unlimited favorites.

Future Monetization:

- In-app donations or subscription (\$1.99/month).
- Partnerships with Islamic content creators and educational institutions.

Sales Strategy:

- Focus on user adoption and retention before monetization.
- Use referral bonuses and “invite a friend” campaigns to increase reach.

Step 4: Build Your Marketing Strategy

Pre-Launch:

- Create a **landing page** with early access signup.
- Share development journey on social media (Instagram, X, TikTok, LinkedIn).

- Collect user emails for beta testing and feedback.

Launch Phase:

- Run digital campaigns around **Ramadan** or **Hajj** for spiritual goals.
- Partner with Islamic influencers and educators for app reviews.
- Launch on Product Hunt and relevant faith-based communities.

Post-Launch:

- Continue email campaigns with “Daily Ayah” or “Weekly Reflection.”
- Encourage user-generated content: reflections or streak stories.
- Maintain a small marketing budget for retargeting engaged users

Step 5: Identify Your Metrics

Key Metrics:

Customer Acquisition Cost (CAC): Total marketing spend / new users acquired.

Daily Active Users (DAU) / Monthly Active Users (MAU).

Retention Rate: Percentage of users returning weekly/monthly.

Average Reading Streak Length.

User Engagement Rate: Number of mood check-ins, journal entries, and ayah shares.

Monitor CAC monthly i.e, if it increases without matching user growth, adjust marketing or targeting strategies.

Step 6: Make a Plan for Customer Support

Support Plan:

1. In-app feedback form for bug reports and suggestions.
2. FAQ section covering reminders, journaling, and AI suggestions.
3. Chatbot or email-based support.
4. Regular community check-ins via email surveys and social polls.

Goal: Maintain an average first-response time under 24 hours and collect actionable user feedback for product updates.

Step 7: Consolidate Post-Launch Resources

Sustainability Plan:

- Maintain steady marketing through seasonal campaigns (Ramadan, Hajj).
- Publish biweekly blog posts or newsletters with reflections and feature updates.
- Allocate part of revenue to continuous feature enhancement (AI improvement, UX updates).
- Introduce community features (discussion or group reading challenges).

Long-Term Vision:

Evolve from a reading app into a **personal spiritual companion**, combining learning, reflection, and emotional wellness.
