Product requirements

Product name:	
Vision	To have millions of Muslims users who build a consistent daily relationship with the Quran through my app.
Description	The Quran App focuses on building habit, personalization, and reflection to help Muslims create a stronger relation with Deen.
Timing	MVP (Q1) : Reminders, streak tracking Next (Q2–Q3) : Mood-based ayah suggestions, journaling Later (Q4) : AI summarizer, gamification expansion
Status	• Discovery phase completed • MVP feature design in progress • Engineering kick-off planned for next sprint
Team	• PM : 1 Product Manager • Design : 1 UX/UI Designer • Engineering : 2 Mobile Devs (iOS + Android), 1 Backend • QA : 1 Tester • Advisors : Islamic scholar consultant
Background	Users of existing Quran apps often complain about lack of motivation, poor personalization, and limited habit-building support . This app solves those gaps by adding features focused on daily engagement and reflection .

Strategic alignment	- Aligns with company mission: <i>help Muslims worldwide connect with the Quran daily.</i> - Supports retention and engagement metrics (key for subscription revenue model).
Metrics	7-day retention $\geq$ 25% 50% of users use reminders weekly - At least 20% journal once a week
Who it benefits	<i>Muslims wanting app for creating a good relationship with Quran.</i>
Use cases	- A student sets a reminder at 6am and gets a notification to read a short ayah before school. - A working parent uses the streak tracker to stay motivated and feels rewarded for consistency. - A user feeling stressed selects "stressed" AI- mood feature in app suggests a calming ayah. - A user writes daily reflections in the journaling feature to track spiritual growth. - A long-term user receives a monthly summary of their Quran engagement habits.
Assumptions	- Most users will allow push notifications. - Users prefer short, actionable ayahs rather than long passages for quick engagement. - Engagement improves with gamification (badges, streaks). - Early users are tech-comfortable (students, young professionals). - Journaling is a niche but high-value feature for engaged users.
Investment required	Development (6–8 months) : \$120k–150k Design (UX/UI) : \$20k QA + Testing : \$15k Advisory (scholars) : \$5k Total : \$160k–190k for first year MVP + enhancements.

Product architecture and components	• Mobile App (React Native) for iOS & Android • Backend (Firebase/Node.js) for streaks, journaling, ayah API • Database for user data & reflections (secure, encrypted) • Notification Service integrated with OS push services • AI Component (later release): NLP summarizer for reflections
Core features	1. Reminders & Streaks: Daily habit tracking 2. Mood → Ayah Suggestions: Personalized guidance 3. Journaling: Private reflections 4. Gamification (Badges): Motivation through rewards 5. AI Summarizer (Future): Summarize reflections & insights
User experience (UX) and user interface (UI)	• Minimalist, calm design: Neutral colors, Quranic-inspired typography. • Simple onboarding: Reminder setup in first 2 minutes. • Daily dashboard: Streak counter, recent reflections, suggested ayah. • Journaling screen: Clean writing interface with optional prompts. • Gamification layer: Subtle, non-distracting badges & progress animations.
Acceptance criteria	• Users can set & edit reminders with >95% notification reliability. • Streak badge updates correctly (e.g., 7-day streak). • Ayah's suggestions load instantly the when mood is selected. • Journaling saves securely with no data loss. • DAU/MAU ratio of ≥25% within 3 months post-launch.

Scope	In-scope (MVP): - Reminders, streak badges - Basic journaling - Mood-based ayah suggestion (limited moods) Out-of-scope (Future): - AI summarizer - Social sharing / community features - Multi-language translation layers
Open questions	- Should reminders allow multiple times/day or just once for MVP? - Should streaks reset immediately or offer a “grace day”? - Do we preload a curated ayah set or pull dynamically from API? - Is journaling private only, or should we consider optional sharing later?
Notes	- Islamic scholar review required for ayah selection (authenticity). - Must design with data privacy first (encrypted journaling). - App should not feel like a “social media” platform keep focus on spirituality.

Release requirements

Release name:	
Overview	Release v1.0 (MVP) will include daily reminders and streak tracking .
Timing	Q1 2026
Status	In design phase
Team	Same as above (PM, UX/UI, Engineering, QA, Advisor)
Strategic alignment	This release ensures early validation of habit-forming features , key to app stickiness.

Who it benefits	• Busy Muslims who want simple habit reinforcement. • Early adopters to test engagement.
Features	• Customizable reminders. • Streak badges (basic). • Daily engagement tracker.
Milestones	1. Prototype: Week 4 2. Alpha test: Week 8 3. Public launch: Week 12
Dependencies	• Notification system (mobile OS integration). • Backend streak counter.
Open questions	1. Should reminders allow multiple times/day or single only? 2. Which ayahs (short set) to preload for MVP?
Notes	MVP will be deliberately minimal to test engagement.

Epic requirements

Epic name:	
Overview	Build habit-forming core (Reminders + Streaks)
Timing	Q1 2026
Status	Design in progress
Team	PM, UX/UI, Eng, QA
Strategic alignment	Core epic that drives engagement → higher retention → monetization readiness.
Who it benefits	Primary users who need accountability and motivation.

Milestones	- Reminder system live - Streak badge functional - QA passed
User stories	- As a user, I want to set daily reminders so I don't forget Quran reading. - As a user, I want to track streaks, so I stay motivated. - As a user, I want streak badges, so I feel rewarded.
Open questions	Should streak reset immediately if missed, or allow grace period?
Notes	Future expansion → multiple reminders, more gamification.

Feature requirements

Feature name:	
Overview	Feature: Daily Reminder
Timing	Q1 2026
Status	Design in wireframing stage
Team	Assigned to backend, mobile dev, UI/UX
Strategic alignment	Critical for MVP adoption & habit building.
Who it benefits	Users with busy schedules needing structured reminders.
User challenge	Users forget or procrastinate Quran reading.
Value score	High (Reach 9, Impact 8, Confidence 8, Effort 3 → RICE score strong).
Design / UX	- Reminder settings (time picker, toggle on/off) - Notification design (motivational message + ayah)

Impacted functionality	• Push notifications • Streak counter
Open questions	• Allow recurring reminders (daily + multiple)? Or single for MVP?
Notes	Future iterations → smart reminders (detect user reading times).
