

# **Product Management Task**

**Name: Amna Tanveer**

**Week: 1**

## **Title: Product Management Basics Summary**

### **1. What Is Product Management?**

Product management is one of the most important roles in modern businesses. Product management is about navigating a product from an idea to delivering a product that the users will genuinely love, and managing business insight along the way. It's a blend of strategic thinking, a deep insight into users, and collaboration across various teams like design, engineering, social media, and marketing that helps in turning an idea into reality. It's not simply about launching a product but also keeping it practical, valuable, feasible, and evolving.

### **2. What does a Product Manager do? How is it different from a Project Manager or Business Analyst?**

#### **A. What Does a Product Manager Do?**

- They define the product vision and mission.
- They coordinate with the stakeholders around the vision to stay aligned.
- They ensure that they deliver product that the user's love.
- They understand the what the customer want.
- They sincerely comprehend the business goals.
- They prioritize what should be produced.
- They observe industry trends and business opponents.
- They act as a connector, problem solver, a strategist, and team collaborator.

## **B. How Is a Product Manager Different from a Project Manager or Business Analyst?**

### **Project Manager**

- Their main Focus is execution.
- They design timelines, budget allocation, and resources.
- Their job is about getting the work done and done on time.

### **Business Analyst**

- Their main Focus is internal processes.
- They explore in-depth into requirements, data flows, and summarize business requirements into technical specifications.
- They're inward-facing, optimizing and improving business aspects.

### **Product Manager**

- Their main Focus is the product's strategy and market fit.
- They examine outward, seeing what the client desires, foreseeing market trends, and determining the product's direction.
- They bridge business objectives with user requirements.

## **3. Main Phases of the Product Management Lifecycle:**

The phases that a product management lifecycle follows are as below:

Define → Discovery → Validate → Build → Launch → Evaluate → Iterate

### **Phase 0: Define**

- Defining the Business Outcomes/Results.
- Setting clear business objectives.
- Increasing Retention.
- Decreasing the cost.
- Increasing the Market share.

### **Phase 1: Discovery**

- Identifying the client's problems.
- Understanding problems that might come in the way of the business objectives.

**Phase 2: Validate**

- Validating the solutions.
- Finding the right solutions that allow the customers to move forward.

**Phase 3: Build**

- Building the system.
- Engineer and Product Designer work together and make sure the goal comes to life.

**Phase 4: Launch**

- Launching the product at the right time.
- Coordinate with marketing and sales team to ensure the product becomes successful.
- Promoting the product that you have built.

**Phase 5: Evaluate**

- Evaluating the performance and user behavior.
- Collecting qualitative and quantitative data to measure the success of launch.

**Phase 6: Iterate**

- Taking measures to improve the product you have built.
- Manage customer feedback and review.
